# CPI installation system

FESTO

CPI installation system

Key features

FESTO

Key features

Innovative

- Complete concept for decentralised machine and system structure; centralised and decentralised installation can be combined with the CPX terminal
- Decentralised pneumatics and sensors for fast processes
- Centralised electrics for fieldbus and common power supply
- Flexible configuration of the individual CP strings
- Selectable valve terminal sizes for optimum pneumatic control loop systems
- Performance data as for the CP system with the addition of the comprehensive diagnostic capabilities of the CPX terminal

Sturdy

- Electrical accessories to IP65
- Proven valve terminals CPV (compact), MPA-S (sturdy, modular), CPV-SC (small, compact)
- Electrical input and output modules in metal housing or compact in encapsulated plastic housing
- Sturdy connection technology M12, alternatively M8
- IP20 modules for control cabinet installation with spring-loaded terminals or screw terminals

Versatile

- A number of CP interfaces can be combined under one fieldbus node
- Four CP strings up to 10 m in length (radius) facilitate optimum decentralisation
- Max. 32 inputs and 32 outputs/ valves per string
- Available valves:
  – Valve terminal MPA-S, flow rate max. 700 l/min
  – Valve terminal CPV, flow rate max. 1600 l/min
  – Valve terminal CPV-SC, flow rate max. 170 l/min
  – Valve terminals with I-Port interface (VTUG, CPV, MPA-L, VTUB-12, VTOC)
- Input modules with 8 … 32 inputs and output modules with 4 … 8 outputs, each with or without additional power supply

Reliable

- Sturdy modules and accessories
- Ready to install system including CP cable (hybrid cable for data and power)
- Polarity-safe and short circuit proof connections
- Valves with separate load voltage supply
- All modules equipped with local diagnostics and status LEDs
- Diagnostics of each CP string via controller/fieldbus
- Intelligent system (save button) "learns" current configuration
- Easy replacement of modules at any time

CPI installation system

Key features

CPI installation system

The CPI system is capable of meeting two completely different requirements and resolves the conflict between extensive decentralised modularisation and electrical installation.

High-speed machines require short cycle times and short pneumatic tubing. The valves must be mounted close to the cylinders. The CPI system was developed to meet these requirements without having to wire each valve individually.

The system integrates the modular valve terminals CPV and various input/output modules in a single installation concept.

All CP valve terminals and CP modules are connected using a ready to install CP cable, and are attached to the CP interface. Four modules, for example one CPV valve terminal and one to three CP input modules, make up an installation string that ends at the CP interface.

Scope of features:
- Max. 4 installation strings per CP interface
- Max. 10 metre line length per string (radius)
- Max. 4 CP modules per string
- Max. 32 inputs and max. 32 outputs per string

The number of CP modules that can be connected and the number of inputs/outputs is dependent on the type of CP

module and CP interface. The maximum configuration (4 modules per string, 32 inputs/outputs) is only possible in combination with the CPX terminal and CP modules with CPI functionality.

The CP interface is the central connection point for the valve power supply and the sensor supply. The power supply for the sensors connected to the input modules is separate from the load voltage of the valves.

Integration of the CPI installation system in various connection concepts

### Centralised pneumatic connection (valve terminal)

Advantages

- Pneumatic multiple connector plate
- Less tubing required than with individual valves
- Common valve air supply
- Central positioning
- Material, weight and cost savings

Disadvantages

- Only effective with a large number of closely spaced actuators
- Heavier than an individual valve (lower overall weight than the same number of individual valves), which may make assembly on moving systems or in very cramped installation spaces difficult
- Longer tube lengths are occasionally required, ruling out the possibility of optimum pneumatic performance

### Decentralised pneumatic connection (individual valve/valve on individual sub-base)
Advantages

- Can be positioned directly at the actuator, can even be integrated
- Short tubing length to the actuator enables short switching times
- Optimum pneumatic timing and performance possible

Disadvantages

- Air supply per valve requires more tubing
- Serial electrical interlinking not advisable/possible
- More complex electrical installation

Centralised electrical connection (multi-pin plug/bus connection/standalone minicontroller)
Advantages

- Internal electrical interlinking requires less cabling
- Increased transparency
- Material, weight and cost savings
- Ideal for connecting a large number of closely spaced valves

Disadvantages

- Not suitable for individual, more widely separated applications due to the more complex cabling
- More complex individual components (cables, fieldbus modules)

CPI installation system

Peripherals overview

Integration of the CPI installation system in various connection concepts

Decentralised electrical connection (CPI system/individual valve/valve on individual sub-base/valve manifold)

Advantages

- CPI system with reduced installation complexity for groups of actuators/sensors
- Different levels of complexity with widely separated individual components
- Easy replacement of components during servicing
- Optimum pneumatic timing and performance possible

Disadvantages

- Limited spatial expansion possible (CPI system up to 10 m, AS-interface up to 100 m)
- High installation costs

Combined centralised and decentralised connection (valve terminal with CP interface/output module)

Advantages

- Can be scaled to different requirements within a system
- One control interface in the system, reduces installation complexity with closely and widely spaced actuators
- Enables an optimum electrical and pneumatic control chain

Disadvantages

- Application must at least partially meet the requirements of a centralised connection

Connection of the CPI installation system to a higher-level controller

Bus node/Industrial Ethernet

Different bus nodes are used for integration in the control systems of various manufacturers.
The CPI system can therefore be operated via more than 90% of the most commonly used bus systems.

- PROFIBUS
- INTERBUS
- DeviceNet
- CANopen
- CC-Link
- EtherNet/IP
- PROFINET
- POWERLINK
- EtherCAT
- Sercos III

Control block

The optional Front End Controller CPX-CEC enables simultaneous access via Ethernet and an integrated web server, as well as autonomous pre-processing.

- Ethernet
- TCP/IP
- Web

Connection of modules in the CPI installation system

CP interface within the context of the CPX terminal

Using the CP interface as a module of the CPX terminal facilitates the progression from the CP system to the CPI system.
All CP modules are both downwards and upwards compatible and can therefore be used in the CP system and in the CPI system.

This extension has doubled the scalability and range of CP modules that can be used:
- 4 CP strings
- Up to 4 modules per string
- Up to 32 inputs and outputs per CP string

An added advantage of the CPI system is its extremely user-friendly access possibilities via the CPX bus node and the CPX-CEC:

- Data pre-processing
- Diagnostics via software
- Reading out of status information
- Display via permanently installed or mobile unit
- Remote maintenance with CPX-CEC and Ethernet connection

Fieldbus Direct

Special feature

The Fieldbus Direct product range is the most compact way of connecting valves to a fieldbus. The bus node is directly integrated in the electrical actuation of the valve terminal and therefore takes up only a minimal amount of space.

Application

Fieldbus Direct is a system for the compact connection of a valve terminal to different bus standards. The most important bus protocols including PROFIBUS, INTERBUS, DeviceNet and CANopen are supported. The CP string extension option allows the functions and components of the CPI installation system to be used.

Characteristics of Fieldbus Direct

- Extremely compact and space-saving design
- Low-cost solution for the connection of a small number of valves to the fieldbus
- Direct front-end integration with a high degree of protection (IP65)
- Comprehensive diagnostics and condition monitoring

- ☖ - Note

The range of functions and combination options of CPV, CPV-SC and MPA-S valves are described in detail in

➜ Internet: cpv
    (Valve terminal CPV)
➜ Internet: cpv-sc
    (Valve terminal CPV-SC)
➜ Internet: mpa-s
    (Valve terminal MPA-S)

Fieldbus Direct and CP string extension

The optional string extension allows a further valve terminal and I/O modules to be connected to the Fieldbus Direct bus node.

- A CP string of the CP system is integrated in the bus node as an extension
- Different input and output modules as well as CPV and MPA-S valve terminals can be connected

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on-site. All of the required electrical signals including load current supply are transmitted via the CP cable, which in turn means that no further installation is needed on the expansion module.

The CP string interface offers:

- Max. 32 input signals
- Max. 32 output signals for output modules 24 V DC or solenoid coils
- Logic and sensor supply for the input modules

- Load voltage supply for the valve terminals
- Logic supply for the output modules

CP input/output modules in sturdy, universal and compact design or as a valve terminal

Input and output modules with different electrical interfaces are available for connecting sensors and actuators:

- M12-5PIN
- M8-3PIN
- M8-4PIN
- Spring-loaded terminal or screw terminal technology

The maximum number of inputs/outputs that can be connected to the individual modules can vary depending on the application. The following module sizes are available:

- Input modules with 8, 16 or 32 channels
- Output modules with 4 or 8 channels
- CPV with 4, 6 or 8 valve slices (max. 16 valves)
- MPA-S with 2 … 32 valves
- CPV-SC with 4 … 16 valves

Valve terminals with CP interface
CPV valve terminal
CPV10
CPV14
CPV18

- Max. 16 valves in 8 valve slices
- Highly compact and space-saving
- Width 10, 14, 18 mm
- Nominal flow rate 400/800/1600 l/min
- CPV10 and CPV14 with CPI functionality
- CPV18 with CP functionality

Connection of input and output modules in the CPI installation system

Special features of the CP input/output modules of sturdy design

The sturdy CP input/output modules have a highly resistant aluminium housing and its internal electronic components can be repaired or replaced.

As a CP-E…Z or output modules they have a separate load voltage supply, which means less load on the CP interface and CP cable and more power

for the connected consuming devices. This also facilitates separate disconnection of the consuming devices.

High degree of protection (IP65), surpassed only by the compact CP modules with IP65/67 protection. The only exception is the IP20 protection offered by the module with clamped terminal connection for installation in control cabinets.

CP input modules of sturdy design
CP-E16-M12x2-5POL

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display
- CP functionality

- M12 plug, double allocation
- 1x M9 CP connection
- PNP/NPN, IP65
CP-E16-M8

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display
- CP functionality

- M8 plug, single allocation
- 1x M9 CP connection
- PNP/NPN, IP65

CP-E16-M8-Z

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display
- CP functionality

- Galvanic isolation through additional power supply
- M8 plug, single allocation
- 1x M9 CP connection
- Separate sensor supply
- PNP/NPN, IP65

CP output modules of sturdy design
CP-A08-M12-5POL

- 8 outputs 24 V DC
- Output signal display via 8 LEDs
- Operating status display
- M12 plug, single allocation
- CP functionality

- 2x M9 CP connection
- Separate load voltage
- Outputs resistant to overloads and short circuits
- PNP, IP65

Connection of input and output modules in the CPI installation system
Special features of the CP input/output modules of economical design

In addition to the sturdy CP input/output modules and the compact CP input/output modules, there are also the economical modules with the design features of the compact modules, but with a greater number of inputs/outputs.

The economical CP modules feature a compact design, coupled with a large number of inputs/outputs.
The modules can be used in connection with the following valve terminals:
- CPV, MPA-S, CPV-SC

Application:
- Same function, configuration and commissioning as sturdy or compact CP modules
- Integrated H-rail mounting and earthing plate
- Centrally placed status and diagnostic LEDs
- The economical CP modules and the other CP modules can be operated together on a string

- The maximum number of modules per CP string is as follows:
  – CPI system: max. 4 modules or max. 32 inputs and 32 outputs
 – CP system: one valve terminal/ output module and one input module

CP input modules of economical design
CP-E16-M12-EL
- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display (per module and per group of four inputs)
- CPI functionality

- 8x M12 plug, 5-pin, double allocation
- 2x M9 CP connection
- PNP, IP65
CP-E16-M8-EL
- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display (per module and per group of four inputs)
- CPI functionality

- 16x M8 plug, 3-pin, single allocation
- 2x M9 CP connection
- PNP, IP65

CP output modules of economical design
CP-A08-M12-EL-Z
- 8 outputs 24 V DC
- Signal status display via 4 LEDs
- Operating status display (per module and per channel/output)
- CPI functionality

- 8x M12 plug, 5-pin, double allocation
- 2x M9 CP connection
- Outputs resistant to overloads and short circuits
- PNP, IP65

Connection of input and output modules in the CPI installation system

Special features of the CP input/output modules of compact design

In addition to the sturdy and economical CP input/output modules, there is also the compact series of CP input/output modules. These have an optimised, compact design, are made from plastic and are very light. They are, of course, available with the high degree of protection IP65/67 (exception: terminal modules in IP20 for installation in a protected fitting space).

The compact CP modules are designed for use in handling and assembly wherever space requirements and product weight play a role.
The modules can be used in connection with the following valve terminals:
• CPV, MPA-S, CPV-SC

Application:
• The modules can be positioned closer to the actuators thanks to the smaller dimensions
• Same function, configuration and commissioning as sturdy or economical CP modules
• The compact CP modules and the other CP modules can be operated together on a string

• The maximum number of modules per CP string is as follows:
  – CPI system: max. 4 modules or max. 32 inputs and 32 outputs
 – CP system: one valve terminal/ output module and one input module

---

CP input modules of compact design
CP-E08-M12x2-CL

• 8 inputs 24 V DC
• Signal status display via 8 LEDs
• Operating status display
• CPI functionality

• 4x M12 plug, 5-pin, double allocation
• 2x M9 CP connection
• PNP, IP65/67
CP-E08-M8-CL

• 8 inputs 24 V DC
• Signal status display via 8 LEDs
• Operating status display
• CPI functionality

• 8x M8 plug, 3-pin, single allocation
• 2x M9 CP connection
• PNP, IP65/67
CP-E16-KL-CL

• 16 inputs 24 V DC
• Indirect signal status display via LEDs in the connection set of the tension-spring socket
• Operating status display
• CPI functionality

• Screw terminal or tension-spring sockets
• 2x M9 CP connection
• PNP, IP20

CP output modules of compact design
CP-A04-M12x2-CL

• 4 outputs 24 V DC
• Signal status display via 4 LEDs
• Operating status display
• CPI functionality

• 4x M12 plug, 5-pin, double allocation
• 2x M9 CP connection
• Outputs resistant to overloads and short circuits
• PNP, IP65/67

CPI installation system

Key features – Mounting options

H-rail mounting

CP interface
The H-rail mounting is formed in the reverse profile of the CPX interlinking blocks. The CPX terminal can be attached to the H-rail using the H-rail mounting.

The CPX terminal is attached to the H-rail as follows (see arrow A). It is first swivelled on the H-rail and then secured in place with the clamping component (see arrow B).

The following mounting kit is required for H-rail mounting (plus mounting kit for optionally mounted valves):
• CPX-CPA-BG-NRH
This enables mounting on H-rails to EN 60715.

Economical CP modules
The H-rail mounting is impressed in the reverse profile of the economical CP modules. The modules can be attached to the H-rail using the H-rail mounting.

The module is attached to the H-rail as follows (see arrow A). It is first swivelled on the H-rail and then secured in place with the clamping component (see arrow B).

The scope of delivery includes the following mounting kit for H-rail mounting:
• CP-EL-HS
This enables mounting on H-rails to EN 60715.

Compact and sturdy CP modules
For the CP modules there is a mounting kit that can be used on an H-rail. On the compact CP modules, the mounting holes are covered by inscription labels.

The following mounting kit is required for H-rail mounting:
• CP-TS-HS35
This enables mounting on H-rails to EN 60715.

Wall mounting

CP modules
The CP modules (with screws up
to 4 mm in diameter) can be mounted
on even surfaces in almost any
position using the mounting holes.

- ⁞ -   Note

The mounting holes on the compact
CP modules are covered by
inscription labels.

Inscription system

| All CP modules have holders for inscription labels. | Inscription labels/holders are not included in the scope of delivery and can be ordered separately. | The labels can be pre-assembled on request. |

Robust CP modules
IBS-6x10

The sturdy CP modules have two slots in which the inscription labels IBS-6x10 (Part No. 18576) can be fitted. At least one inscription label can be fitted per connection.

The IBS-6x10 are plastic clips that can be printed on, written on or affixed with labels.

Economical CP modules
ASCF-H-E2

The economical CP modules have six lateral fixtures for one inscription label holder ASCF-H-E2 each (Part No. 547473).

The ASCF-H-E2 are transparent hinged label holders for holding pre-assembled paper inscription labels. The label can be read when the label holder is opened out.

Compact CP modules
IBS-8x20

The compact CP modules have a holder for an inscription label IBS-8x20 (Part No. 539388) for each connection.

The IBS-8x20 are plastic clips that can be printed on, written on or affixed with labels.

CPI installation system

Key features – Power supply

Operating voltage and load current supply

The following functions are made available to the connected modules through the CP cable:
- Connection for data exchange
- Operating voltage for internal electronics
- Load current supply for the connected inputs/sensors and/or outputs/actuators

CP-E...Z or output modules from the sturdy and the economical series have a separate load voltage supply:
- Less load on the CP interface and CP cable
- 0.5 A per output (max. 4 A supply per output module)
- 1 A per 8 inputs
- Separate disconnection of the consuming devices possible

Every module in the CPI system is protected separately against overload with electronic fuses.

The input modules without additional supply provide a maximum sensor supply of 500 mA in the sturdy design, 800 mA in the compact design and

700 mA in the economical design with 16 inputs and 1400 mA with 32 inputs.

The input modules with additional supply provide up to 2 A residual current for the connected sensors.

Example of circuits for additional power supply
1 Load voltage supply (can be disconnected separately)
2 External fuses
3 Protective earth
4 Equipotential bonding
5 Earth terminal on pin 4, rated for 12 A

Pin allocation of plug for additional power supply

Pin allocation	Pin	Signal	Designation
	1	24 V DC	Supply for electronics and inputs
	2	24 V DC	Load supply for valves/outputs
	3	0 V	Equipotential bonding
	4	0 V	Earth terminal and equipotential bonding, rated for 12 A

CPI installation system

Power supply concept of the CPX terminal

Circuit diagram for M18 power supply/system supply (example)

System supply
The use of decentralised devices on the fieldbus – particularly with high protection for direct machine mounting – demands a flexible power supply concept.

The CPX terminal facilitates the connection of all voltages via one connection.

A distinction is made between supply for
- electronics and sensors/inputs
- valves
- actuators/outputs

Selectable connecting thread:
- M18
- 7/8"
- AIDA push-pull

- Note

The CP interface connects the 0 V of the power supply for the electronics/inputs and the valves. To prevent overloads, the power must therefore be supplied using just one power supply module or using power supply units with a common earthed conductor.

Interlinking blocks

Many applications require segmenting of the voltage into zones. This is true in particular of the separate disconnection of connected actuators (solenoid coils/outputs).

The separation of voltages for valves and the realisation of different voltage segments for electrical outputs and sensors are supported by the different interlinking blocks of the CPX terminal:
- With system supply
- Without power supply
- With additional power supply for electrical outputs
- With additional power supply for valves

The supply voltages are supplied using a
- 4-pin M18 plug
- 4-pin 7/8" plug
- 5-pin 7/8" plug
- AIDA push-pull, 5-pin
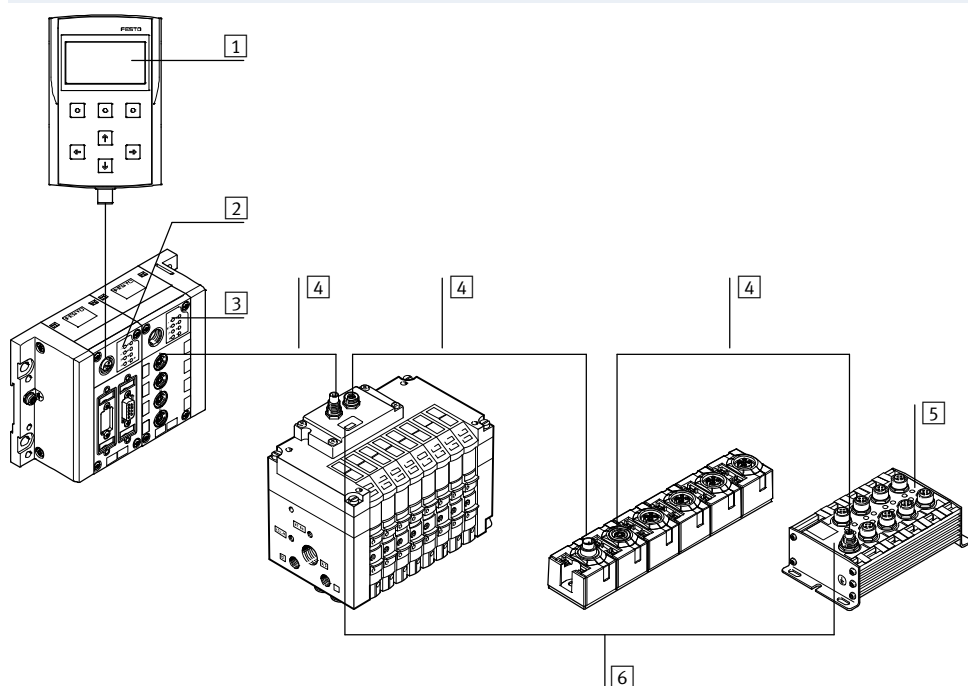

- Note

The max. current is limited to 12 A with the 7/8" system supply. When using a conventional pre-assembled cable, the max. current is limited to 8 A.

General limits

System supply

The system supply provides the internal voltage for the entire CPX system with
- max. 16 A for electronics and sensors/inputs
- max. 16 A for actuators/outputs and valves

CP interface

The CP interface and the CP modules connected to the CP interface get their operating voltage from the connection for electronics and sensors/inputs.

The operating voltage for the sensors/actuators connected to the CP modules is supplied from the voltage for valves. The CP interface supplies the

connected CP modules with
The CP interface supplies the connected CP modules with
- max. 1.6 A per CP string

Diagnostics

General information

A comprehensive diagnostic function is available for each string.
The diagnostic information can either be detected via the LEDs on the module and then read out and evaluated via the controller software (non-fieldbus-specific) or displayed directly on the CPX terminal via the CPX-MMI and then evaluated and edited.

Diagnostics via LED

- Error in bus communication
- POWER, power supply display for internal electronics
- POWER V, load voltage display for valves
- 0 … 3, CP string allocation changed or interrupted

There are also bus-specific LED displays.

Diagnostics via control program/CPX-MMI

- Configuration error
- Bus error
- Operating voltage failure
- Falling below voltage tolerance (valves)
- Short circuit in sensor voltage supply

- Operating voltage failure at the output modules
- Short circuit/overload at the output modules
- Connection to one or more CP modules interrupted (valve terminal, input/output modules)

Diagnostics via CPX terminal

1 Diagnostics via controller/bus node
2 Bus-specific LED
3 String diagnostics via LED on the CP interface
4 Diagnostics via CP string
5 Diagnostics via LED on CP module
6 Status display on the CP module

Diagnostics

Diagnostics via CP bus node

1 Diagnostics via fieldbus
2 Bus-specific LED
3 String diagnostics via LED on the bus node
4 Diagnostics via LED on the CP module
5 Diagnostics via CP string
6 Status display on the CP module
Diagnostic LEDs on the CP modules
1 Status LED for CP communication (PS, green)
2 Status LED (module) for short circuit/overload of sensor supply (red)
3 Status LEDs for inputs (status display, green)
4 Status LED (group, only with CP-E16-...-EL) for short circuit/overload of sensor supply (red)

In addition to the status display per module and per individual channel/input, the economical modules with 16 inputs additionally have a status display for a group of four inputs. The following inputs are combined into groups of four:
- 0 ... 3
- 4 ... 7
- 8 ... 11
- 12 ... 15

Parameterisation

Allocation of the addresses to the individual actuators/outputs or sensors/inputs connected to the CP modules is performed in accordance with the bus node or CPX-CEC used (exception: INTERBUS node). Address allocation is performed in accordance with the following rules:

- One CP interface provides four strings with a total of 128 inputs and 128 output addresses.
- A used string occupies 32 inputs and 32 output addresses.
- The addresses are permanently allocated to the strings and CP modules in ascending order.
- Unused address space remains reserved for future extensions.

The CP interface checks the configuration of the connected modules each time the system is switched on and during operation. If a deviation from the saved configuration is detected, an appropriate message is output via the controller software and displayed via LED.
The configuration detected is stored by pressing the Save button (after the operating voltage is switched on at the CP interface).

The configuration is stored each time the CP interface is switched off and back on.
The option is provided of replacing a connected CP module with a module of identical design during operation. Removal of more than one module from the current configuration will be detected as an error; the address spaces of these modules will no longer be actuated.

CPI installation system

Technical data – Input modules CP-E16

Function

Digital input modules facilitate the connection of proximity sensors or other 24 V DC sensors (inductive, capacitive, etc.).
M12 plugs with double allocation are separated using sensor/actuator distributors.

Application

- Input modules for 24 V DC sensor signals
- M8 and M12 plugs, single allocation connection technology with 16 connections, double allocation connection technology with 8 connections
- M12 plug, 5-pin
- The input statuses are indicated for each input signal on an assigned LED
- 24 V DC supply provided for all connected sensors
- Diagnostic LED for short circuit/ undervoltage of sensor supply
- Diagnostic LED for short circuit/ interruption of external sensor supply with CP-E-16-M8-Z

Function

The electrical outputs activate actuators such as individual valves, lamps, signal equipment and many more.

- ⬚ - Note

Optimum actuation of valves with M12 central plug.

Application

- Output module with 8 outputs 24 V DC
- M12 connection technology, 5-pin sockets
- LED display of the switching status per channel
- Short circuit and overload detection
- Malfunction display by means of green LED

CPI installation system

Function

The electrical outputs actuate actuators such as individual valves, lamps, signal equipment and many more.

- ⚙ - Note

The output module is ideal for actuation of valves with M12 central plug.

Application

- Output module with 8 outputs 24 V DC
- M12, 5-pin connection technology
- Display of the switching status per channel via LED
- Short circuit and overload detection
- Malfunction display by means of red LED
- Module supports the CPI functionality (only in combination with the CPX CP interface)
- Circumferential labelling with large, hinged inscription label
- Earthing plate and H-rail mounting already integrated

FESTO

CPI interface for integrating components with I-Port interface into the installation system CPI from Festo.

The module has basic diagnostic functions. It has 4 integrated LEDs for on-site display. A maximum of 4 byte inputs and 4 byte outputs are transmitted in the cyclic process image.

Application

Fieldbus connection/power supply

In the CPI system, the power supply and the communication signal are routed via a common port.	The bus node additionally has an M9 plug connector for connection to the signal coming from the CPI master and an M9 socket for transmitting the signal to other CPI modules.	The series connection of CPI modules (string) can contain a maximum of 4 modules with CPI functionality. The number of outputs/inputs per string is limited to 32 of each.	The maximum length of a string is 10 m.

I-Port interface

The bus node supports two interfaces for connecting I-Port devices.	When mounting the bus node on a valve terminal (direct integration) only one interface is used.	When using the bus node CTEU-CP on the electrical connection block CAPC (installation system CTEL), both interfaces are available via the connection block.	The total number of inputs/outputs that can be connected is limited by the overall configuration of the CP string.

CPI installation system

Technical data – MPA-S valve terminals

- ▮ - Flow rate
  - MPA1: Up to 360 l/min
  - MPA14: Up to 550 l/min
  - MPA2: Up to 700 l/min

- ⌐⌐ - Valve width
  - MPA1: 10 mm
  - MPA14: 14 mm
  - MPA2: 21 mm

- ⌐ - Voltage
  - 24 V DC

CPI interface for communication between an MPA-S valve terminal and a CPI master. It activates an MPA-S valve terminal with up to 32 solenoid coils on max. 16 valve positions.

- ▤ - Note

With more than 16 MPA2 solenoid coils an additional electrical supply is absolutely necessary (after 4 electronic modules).
Note that without an additional electrical supply maximum 24 solenoid coils may be switched. If more than 24 MPA1, 24 MPA14 or 12 MPA2 solenoid coils are to be switched simultaneously, an additional supply must be inserted after the third electronic module.

Operating and environmental conditions

Operating and environmental conditions		
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Note about operating/pilot medium		Lubricated operation possible (subsequently required for further operation)
Operating pressure	[bar]	−0.9 … +10
Ambient temperature	[°C]	−5 … +50
Medium temperature	[°C]	−5 … +50
Storage temperature	[°C]	−20 … +40
Relative air humidity		Max. 90% at 40 °C
CE mark (see declaration of conformity)		To EU EMC Directive[1]
		To EU Explosion Protection Directive (ATEX)
Certification		c UL us - Recognized (OL)

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp ➜ User documentation.
   If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

Certifications

Certifications		
ATEX category gas		II 3G
Ex-ignition protection type gas		Ex nA IIC T4 X Gc

- Flow rate
  170 l/min

- Valve width
  10 mm

- Voltage
  24 V DC

CPI interface for communication between a CPV-SC valve terminal and a CPI master. It activates a CPV-SC valve terminal with up to 16 solenoid coils.

| General technical data			
Type			**CPVSC1-AE16-CPI**
CP interface, incoming			Plug M9, 5-pin
CP interface, outgoing			Socket M9, 5-pin
Max. no. of solenoid coils			16
LED display (product-specific)			Status LED for CP communication
			Status LEDs for valves
Nominal operating voltage		[V DC]	24
Operating voltage range		[V DC]	20.4 … 26.4
Power failure bridging	Logic side only	[ms]	10
Current consumption at nominal operating voltage	Load	[mA]	Dependent on valve type and number of valves
	Electronics	[mA]	Max. 100
Materials			Reinforced PA
Note on materials			RoHS-compliant
Dimensions (L x W x D)		[mm]	52 x 70 x 40
Weight		[g]	150

CPI installation system

Order processing information

Configuration guidelines

The CPI system supports a certain number of modules per CP string depending on the type of the CP master and the CP modules connected.

CP masters and CP modules can be split into two different groups:

- With CPI functionality
- Without CPI functionality

CP modules with CPI functionality

CP modules with CPI functionality offer the following features:

- Incoming and outgoing CP interface
- Any arrangement of the modules within a CP string

- Max. 4 modules per CP string
- Max. 32 inputs and outputs can be connected to each string depending on the version

CP modules without CPI functionality

Sturdy CP modules offer the following features:

- CP valve terminals and CP output modules have an incoming and outgoing CP interface
- CP input modules only have an incoming CP interface and therefore

can only be positioned at the end of a CP string

- All CP modules with CPI functionality can also be connected to CP masters without extended functionality

Information on using CP modules with and without CPI functionality

A mixture of CP modules with and without CPI functionality is possible. The following must be noted in this regard:

- Only one input module without CPI functionality is possible per CP string (at the end of a CP string)

- Only one CP valve terminal or output module without CPI functionality is possible per CP string (any point in the CP string)

- Free positions in the CP string can be filled by CP modules with CPI functionality (max. 4 modules)

- Note

The cable length for any given string may not exceed 10 m.

Connecting cables are available in lengths of 0.25 m, 0.5 m, 2 m, 5 m and 8 m

➔ 73

The maximum number of inputs and outputs that can be connected is 32 each (sum of all CP modules on a CP string), regardless of the type of CP module (with or without CPI functionality).

Order processing

There is one way of placing an order for the electrical CPI installation system:

- Digitally using the valve terminal configurator

Please note that the CP strings must be allocated in ascending numerical order, i.e. starting with string 1, followed by string 2, etc. without omitting any numbers.

To correctly allocate a CP string, proceed as follows:

- First select a connecting cable of appropriate length.
- Then select an input/output module.
- Continue in this way until the string is fully allocated (max. 4 strings for CP modules with extended functionality).

The valve terminals are configured separately:

- CPV valve terminal CPV10/14/18-VI-FB-…. ➔ Internet: cpv
- MPA-S valve terminals MPA-S-CPI-VI ➔ Internet: mpa-s
- CPV-SC valve terminals CPVSC1-AE16-CPI ➔ Internet: cpv-sc

The configuration of the valve terminals with I-Port interface is carried out separately in two stages:

- Selection of the CPI interface ➔ Internet: cteu
- Selection of the valve terminal: ➔ Internet: vtoc ➔ Internet: vtub-12 ➔ Internet: cpv ➔ Internet: mpal ➔ Internet: vtug
