

Vacuum generators OVEM

FESTO

Vacuum generators OVEM

Key features

At a glance

Rapid purging of vacuum for safe placement of the workpiece by means of an integrated solenoid valve for controlling the ejector pulse

Central electrical connection via an M12 plug

OVEM-...-1PD/2P/2N/PU/NU/PI/NI/LK

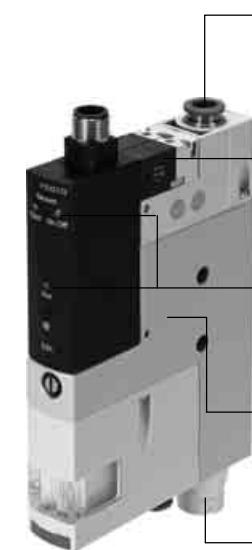

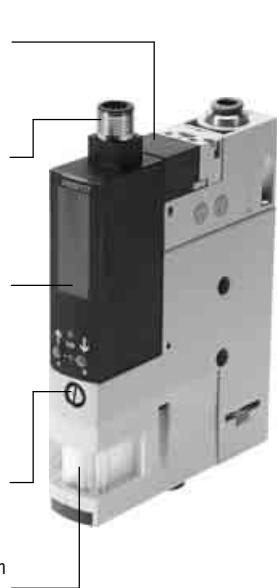

Monitoring and visualisation of the vacuum pressure by means of a vacuum sensor with LCD display (bar)

OVEM-...-LK

Vacuum sensor with IO-Link

Adjustment of the ejector pulse via a flow control screw

Prevention of contamination of the vacuum generator by means of an integrated filter

Quick and secure installation thanks to QS fitting

Fast vacuum build-up by means of an integrated solenoid valve for controlling the compressed air supply

OVEM-...-1P/1N

Monitoring of the vacuum pressure and status displays for switching output and solenoid valves by means of a vacuum sensor with LED display

Prevention of pressure drops by means of an integrated check valve

Maintenance-free operation and reduced noise level through an integrated, open silencer

The modular vacuum generator series

The modular vacuum generator series OVEM offers a wide range of individually selectable functions, making it possible to find a solution for the most varied of applications.

Functions	Values
Laval nozzle	0.45 mm
	0.7 mm
	0.95 mm
	1.4 mm
	2.0 mm ¹⁾
Vacuum generator characteristics	High vacuum
	High suction rate
Housing size	20 mm, metric version, display in bar
	20 mm, NPT version, display in inchHg ²⁾
Pneumatic connections	QS fittings, with or without open silencer
	QS fittings (inch), with or without open silencer ²⁾
	G female thread, with or without open silencer
	NPT female thread, with or without open silencer ²⁾
	Prepared for supply manifold
Normal position of the vacuum generator	Normally open, with or without ejector pulse
	Normally closed, with or without ejector pulse
Electrical connection	Plug M12 (5-pin)
Vacuum sensor	Without vacuum sensor
	1 switching output PNP or NPN, LED display
	1 switching output PNP, LCD display
	2 switching outputs PNP or NPN, LCD display
	1 switching output PNP or NPN and 1 analogue output, LCD display
	IO-Link, LCD display
	InchHg ³⁾
Alternative vacuum display	InchH ₂ O ²⁾ ³⁾
	Bar ²⁾ ³⁾

3) Vacuum sensor with LCD display

Vacuum generators OVEM

Key features

The innovative vacuum generator

Economical

- Short switching times thanks to integrated solenoid valves
 - Vacuum on/off
 - Ejector pulse
- Quick, precise and safe placement of the workpiece by means of the ejector pulse
- Cost saving through preventive maintenance/service thanks to maintenance indicator
- Cost saving through integrated air-saving function
- Powerful supply of multiple vacuum generators via a common supply manifold (→ page 19)
- Low-cost variants with one switching output (OVEM-...-1P/1N)

Easy to use

- Simple installation via M12 plugs and QS fittings
- All control elements are on one side
- Quiet operation thanks to integrated silencers
- Vacuum sensor with LCD display (OVEM-...-1PD/2P/2N/PU/NU/PI/NI/LK)
 - Vacuum is displayed numerically and as a bar chart
 - Important parameters and diagnostic information are displayed

Reliable

- Permanent monitoring of the entire vacuum system via a vacuum sensor to reduce downtimes (condition monitoring)
- Prevention of pressure drop by means of an integrated air-saving function in conjunction with an integrated check valve

Space-optimised

- All functions are compactly integrated in one unit.
- No protruding elements such as valves or vacuum sensor
 - Space-optimised installation is possible as all the control elements can be accessed from one side

Easy to maintain

- Integrated filter with inspection window for maintenance indication
- Reduced contamination of the vacuum generator thanks to an open silencer

Choice of mounting types

- Direct mounting or via mounting bracket
- Straightforward mounting on H-rail via accessories
- Interlocking of multiple vacuum generators on a common supply manifold (→ page 19)

Operating principle of OVEM

Vacuum on/off

The compressed air supply is controlled by an integrated solenoid valve. The solenoid valve can be supplied with two different switching functions, NC and NO.
 • NC - normally closed:
 The vacuum is generated when the vacuum generator is pressurised with compressed air and the solenoid valve has been switched.

- NO - normally open:
 The vacuum is generated when the vacuum generator is pressurised with compressed air and the solenoid valve is in the normal position.

Vacuum sensor

The set or taught-in reference value for the generated vacuum is monitored via an integrated vacuum sensor. If the reference value is reached or if it is not reached due to malfunctions (e.g. leakages, dropped workpiece), the vacuum sensor emits an electrical signal.

Ejector pulse

After the vacuum is switched off, an ejector pulse is activated and generated by means of a second integrated solenoid valve to release the workpiece safely from the suction cup and to purge the vacuum quickly.

Connection to higher-level systems and configuration of the switching outputs

OVEM-...-1P/1PD/1N

- Switching inputs for actuating the solenoid valves for vacuum generation and ejector pulse
- OVEM-...-1P/1N only: one switching output for supplying a control signal
 - Configured as an N/O contact
 - Switching function configured as a threshold value comparator
- OVEM-...-1PD only: one digital switching output for supplying a control signal
 - Switching output can be configured as N/C or N/O contacts
 - Switching function of the output can be configured as a threshold value or window comparator

OVEM-...-2P/2N/PU/NU/PI/NI

- One digital switching input for actuating the solenoid valves
- Two digital switching outputs or one digital switching output and one analogue output for supplying control signals
 - Switching outputs can be configured as N/C or N/O contacts
 - Switching function of the outputs can be configured as a threshold value or window comparator

- If there are two switching outputs, these can be configured independently of each other. This enables tasks to be performed in parallel with one vacuum generator, reducing the time needed for sorting good and reject parts, for example.

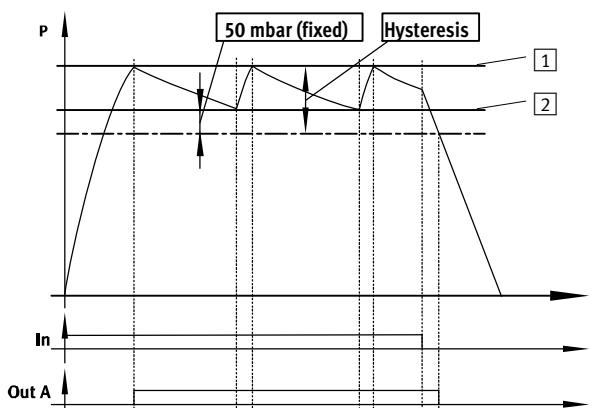

OVEM-...-LK

- Digital setpoint and actual value transfer for simple parameterisation and diagnostic feedback. Communication takes place in IO-Link mode with an IO-Link master.
- SIO mode is supported. In the case of this local configuration using the operating buttons on the vacuum sensor, the OVEM takes on the function of an OVEM-...-2P.

Vacuum generators OVEM

Key features

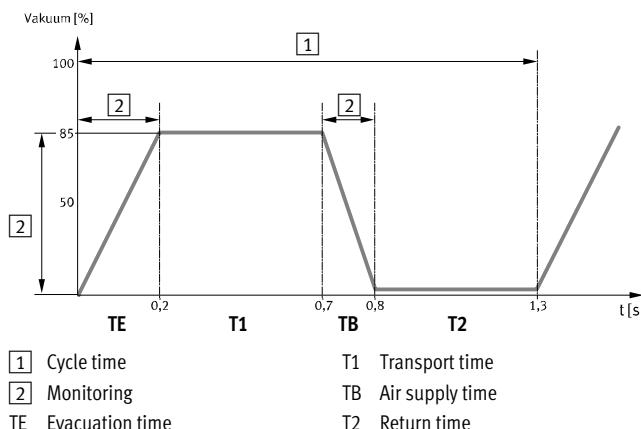

OVEM-...-1PD/2P/2N/PU/NU/PI/NI/LK – Air-saving function LS (-CE, -OE)

If the desired threshold value **[1]** for the vacuum is reached, vacuum generation is automatically switched off. A check valve prevents a decrease of the vacuum. Nonetheless, leakage (e.g. due to rough workpiece surfaces) will slowly

reduce the vacuum. If the vacuum drops below the threshold value **[2]**, vacuum generation is switched on automatically. Vacuum is generated until the set threshold value **[1]** is reached again.

OVEM-...-1PD/2P/2N/PU/NU/PI/NI/LK – Condition monitoring and diagnostics

The main operating parameters

- Vacuum
- Evacuation time
- Air supply time

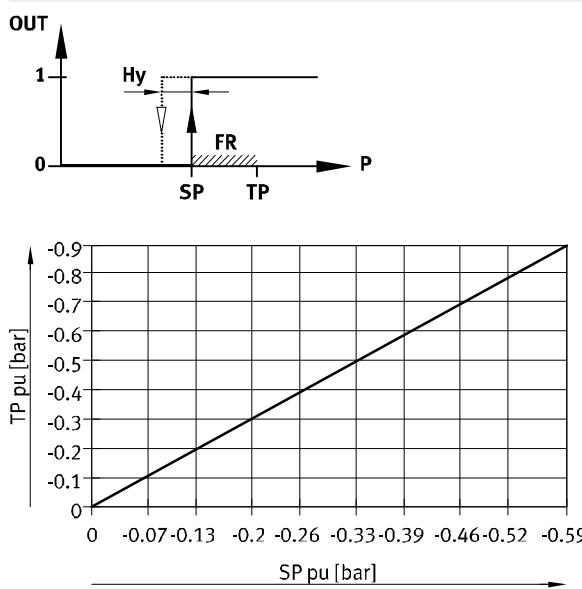

are continuously measured in the vacuum generator and compared with the individually set reference values (condition monitoring). If deviations in the reference values occur, these will be determined by the vacuum generator and shown on the display (diagnostics).

In addition, in the case of an OVEM with two switching outputs (-2P, -2N, -LK in SIO mode) diagnostic messages can also be transmitted by the switching output Out B.

This permits preventative action

- in order to prevent machine failure or downtime, for example, through timely maintenance
- and to ensure process reliability (adherence to the cycle time).

OVEM-...-1P/1N – From the teach-in point to the switching point

TP Teach-in point
SP Switching point

The switching point is determined from the teach pressure and the functional reserve. A function reserve (35% of the teach pressure) is deducted from the teach pressure ($SP = TP - 0.35 \cdot TP$).

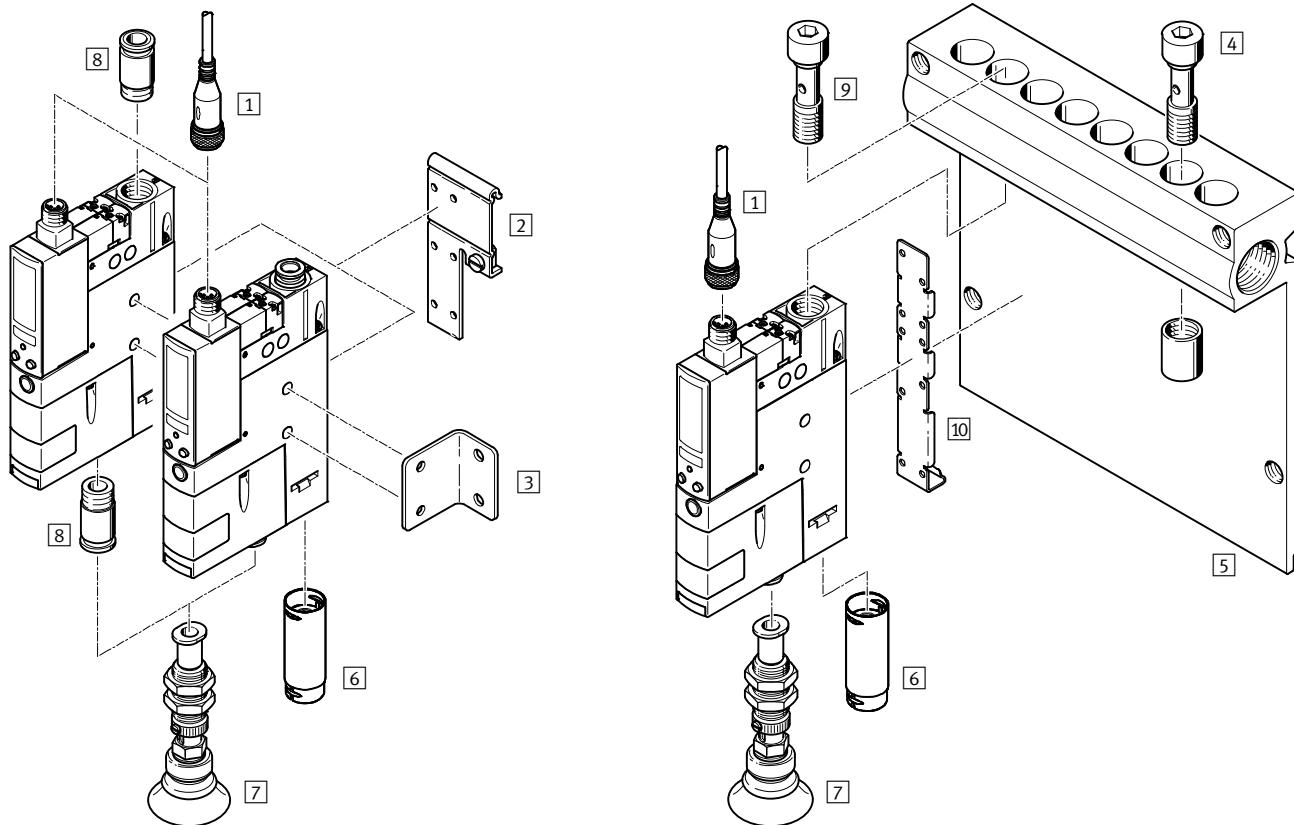

For example, with a teach pressure of -0.5 bar, a switching point of -0.33 bar is set.
The hysteresis has a fixed value.

Vacuum generators OVEM

FESTO

Accessories

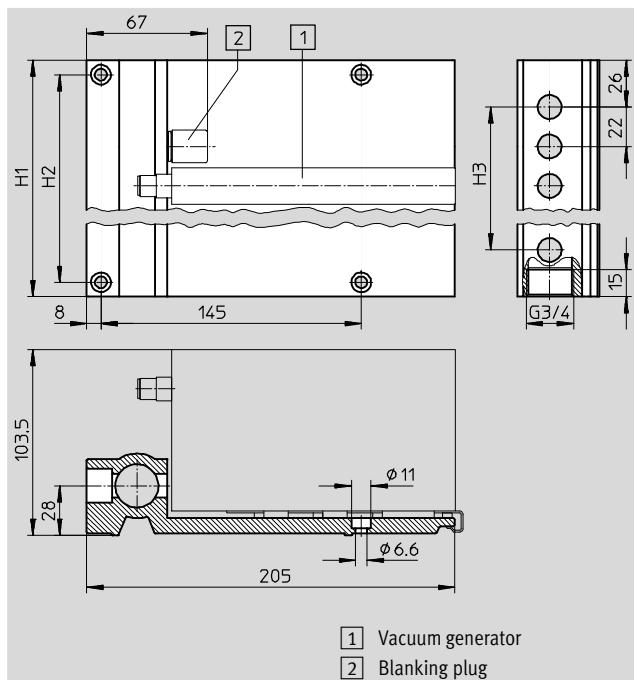

Common supply manifold OABM-P

for vacuum generator
OVEM-...-PL/PO

Pneumatic connection 1: G $\frac{3}{4}$
Type of mounting: Via through-hole

Material: Wrought aluminium alloy

Note on materials:
RoHS-compliant

Dimensions

Number of device locations	H1	H2	H3
4	118	102	66
6	162	146	110
8	206	190	154

Tubing I.D. d_i as a function of total air consumption q_{nN}

Total air consumption [l/min]

50	75	154	175	225	310	400	480	500	750	890	1000	1190	1340	1850	2240	2300	2900
----	----	-----	-----	-----	-----	-----	-----	-----	-----	-----	------	------	------	------	------	------	------

Tubing I.D.¹⁾ [mm]

≥ 2.5	≥ 2.9	≥ 3.8	≥ 4	≥ 4.4	≥ 5	≥ 5.5	≥ 5.9	≥ 6	≥ 7	≥ 7.5	≥ 8	≥ 8.4	≥ 8.8	≥ 10	≥ 10.8	≥ 11	≥ 12
-------	-------	-------	-----	-------	-----	-------	-------	-----	-----	-------	-----	-------	-------	------	--------	------	------

Recommended tubing

Technical data → Internet: pun, pan

PUN-4	PUN-6	PUN-8	PUN-10	PUN-12	PUN-16	PAN-16
-------	-------	-------	--------	--------	--------	--------

1) With a tubing length of 3 m

Note

The total air consumption of the fully equipped common supply manifold can be determined by adding the individual consumption of each generator used. Note that in the case

of vacuum generators with ejector pulse (OE, CE), the individually set values for the ejector pulse (duration and intensity) can result in much higher air consumption.

Ordering data and weight

	No. of device locations	CRC ¹⁾	Weight [g]	Part No.	Type
Common supply	4	2	767	549456	OABM-P-4
	6	2	1045	549457	OABM-P-6
	8	2	1330	549458	OABM-P-8

1) Corrosion resistance class CRC 2 to Festo standard FN 940070
Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.

FESTO

Blanking plug OASC-G1-P

For common supply OABM-P...

Type of mounting: threaded

Max. tightening torque: 10 Nm

Material:

Hollow bolt: Wrought aluminium alloy

Blanking cap: Steel

Seals: Steel, nitrile rubber

Note on materials:

RoHS compliant

Ordering data

	CRC ¹⁾	Weight [g]	Part No.	Type
