# Pneumatic valves VUWS/valve manifold VTUS

**FESTO**

Key features

## Pneumatic valves VUWS

In-line valve VUWS-L as individual valve (piston spool valve)

In-line valve VUWS-LT as individual valve (disc seat valve)

## Valve manifold VTUS

In-line valves are designed to be used without pneumatic linking. All pneumatic connections are on the valve and can be equipped with fittings/tubing.

By using a special seal set, the in-line valves can also be mounted on a manifold rail (pneumatic linking) as semi in-line valves.

Pneumatic valves VUWS have a sturdy design that enables them to be used in harsh environments.

Pneumatic valves VUWS are extremely well suited for controlling cylinders or compressed air networks for easy clamping and locking processes in semi-automatic assembly and manufacturing.

Key features – Pneumatics

## Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold block/ supply manifold and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUS.

A pressure zone is created by isolating the internal ducts between the valve positions by means of an appropriate separator.

The separator can be used in the following ducts:

- Duct 1
- Duct 3
- Duct 5

 - Note

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/ supply for each pressure zone

Duct separation	Description
	<p>The pressure zones can be freely configured with the VTUS. The following duct separations are possible:</p> <ul style="list-style-type: none"> <li>• Duct 1 closed                              </li> <li>• Duct 1/3/5 closed                              </li> <li>• Duct 3/5 closed                              </li> </ul>
	<p>The number of pressure zones with the VTUS is limited by the number of valve positions on the manifold block/supply manifold. Note that each supply plate occupies one valve position. There must always be at least 2 valve positions between 2 separators. In the case of a maximum extension of 16 valve positions, a maximum of 9 pressure zones can be created.</p>

## Mounting the valve manifold

Sturdy valve manifold owing to:

- Four through-holes for wall mounting
- H-rail mounting

 Note

Use the thread M4 (M5 for size 30) provided on the manifold block for earthing the valve manifold.

## Wall mounting

Sturdy wall mounting of the manifold block using four through-holes.

1 Earth terminal

## H-rail mounting

The H-rail mounting VAME-T-M... consists of two mounting clips. These are screwed to the manifold block on the left and right.

The prepared manifold block is then lowered onto the H-rail from above (arrow A) and clipped into the H-rail at the bottom (arrow B).

 Note

- Note the max. tightening torque of the screws for H-rail mounting.
- Only horizontal H-rail mounting is permissible.
- Mounting only possible on H-rail TH 35-... to EN 60715.
- Vibration/shock loads are not permissible with H-rail mounting.
- Further note on assembly

## Special features of pneumatic 3/2-way valves

Reset: mechanical spring

Internal pneumatic spring

- Faster switch-off time
- In the case of dual-pressure operation, the higher pressure must always be present at port 1
- Pressure on port 2 not permitted

Reset: pneumatic spring

External pneumatic spring

- Can be used as a bistable valve
- Signal pressure depends on the pressure of the pneumatic spring
- No impairment of the switching function caused by vacuum
- Pressure is permitted on port 2
